WASTE MANAGEMENT

Course Objective

Waste handling is a complex activity which keeps our environment clean and healthy. Society never approached this subject with pride and importance which it deserved. With the enactment of Waste Management Rule 2016 by Government of India, waste management has now fundamentally changed into closed-cycle management in which waste generation and waste management are carried out with particular attention to the sparing use of natural resources and protection of people and the environment. In particular, people have to acquire competence in the fields of waste prevention, waste utilization, and waste treatment. Waste - As society strives to use resources more efficiently, we must ensure waste is properly and safely managed. Through Courses designed at SKILLS 2 CAREER students will study sustainable waste management, contaminated land and landfill engineering, reuse and recycling in the manufacturing sector and more. SKILLS 2 CAREER is committed to evangelize importance of systematic waste disposal thereby whole heartedly supporting the efforts of government functionaries. Today waste management is facing severe challenges due to non-availability of skilled man power.

Career Prospects

Comprehensive courses offered at SKILLS 2 CAREER will give students an understanding of the broad scope of the waste and resources management sector and practical experience to help you do your job, apply your understanding of resource and waste management systems, waste composition, industry best practice and national waste strategies in your day-to-day work, compare the options available for the prevention, recovery, reuse, treatment and disposal of waste and resources throughout the whole management system. The most common role in waste management is that of the waste management officer. A major chunk of a waste management officer's job involves providing advice and guidance to companies and industrial waste sites about issues concerning their waste disposal. A lot of businesses don't know how to store waste, let alone know where to dispose of it. Careers in waste management are pretty full-on. After all, waste never stops; it only ever increases and increases. If you're determined and organized though, your career can make a huge difference to the environment.

Course Title

Advanced Diploma in Integrated Waste Management.

Course Contents

Course is designed with 8 subjects.

- ✓ Principles Of Waste Management
- ✓ Disposal Methods - Key Challenges
- ✓ Statutory Requirements and Legal Obligations
- ✓ Reduce , Re-Use & Recycling Practices
- ✓ Waste Handling and Transport
- ✓ Liquid Waste-Management
- ✓ Hazardous, Bio Medical, Construction & Debris Waste Management
- ✓ Financial Models

Course Eligibility

Students who have completed their graduation can enroll for this program.

Placements

On Successful completion of the course, students will be eligible for **Placement Assistance** from SKILLS 2 CAREER.

Certification

On Successful completion of the course, students will be certified by Scientific & Technical Education Development Council (STED COUNCIL) an Autonomous Body and a National Level Organization registered under Govt of Kerala and Indian NGO under National Capital Territory (Govt. of N.C.T) New Delhi, Government of India through SKILLS 2 CAREER.
